

Figure 4-G: Westchester to Bridgeport

- a. **Merritt Parkway.** The first landmark is the Merritt Parkway, an old four-lane highway running roughly north/south about two nautical miles (3.7 kilometers) east of Westchester airport. Soon thereafter, it curves toward the east, so we'll be able see it out our left window for several minutes.
- b. **Towers in Norwalk.** Several radio towers in Norwalk, Connecticut, reach 490 feet (149 meters) MSL. They're about 12 nautical miles (22.2 kilometers) east of Westchester, about halfway to Bridgeport. The Connecticut coastline will be visible to the south and east from this point and altitude.
- c. **Interstate 95.** Soon after passing the towers in Norwalk, we'll fly over Interstate 95, a wide, busy expressway running roughly east/west (look for a wide road in your flight simulator). We can visually follow it to Bridgeport.
